

## **TPO (thermoplastic polyolefin)**

TPO single-ply roofing membranes are among the fastest growing commercial roofing systems. Mainly this is due to the increased use in the southern climates where reflective, energy-efficient and cool roof products are becoming the standard. TPO roofing membranes provide exceptional resistance to ultraviolet, ozone, and chemical exposure. Thermoplastic membranes are flexible, reinforced, and heat-weldable membranes. TPO membranes are available in a variety of colors.

We install high quality Firestone and GAF thermoplastic materials.
