

Solutions to create anti-slip surfaces on stairs and floors

Anti-slip tape:

3M's Safety-Walk is like a coarse sandpaper that you stick to slippery surfaces to improve traction.

Grate materials:

Paint with sand:

To uniformly increase the friction of a large area you can add abrasive particles such as sand texture additives to floor paint. You simply stir it in and then paint as normal. You can also purchase paint that already has a sand texture to it.

Anti-slip floor coatings:

There is an array of manufacturers that make anti-slip floor coatings and treatments. These products range in solutions for concrete, masonry, wood, tile and metal to water resistant products for the shower, bathtub and pool regions.
