

Fire Hydrant

FIELD'S
Fire Protection, Inc.

NFPA 25 requires you to maintain your fire suppression systems in good working order and to maintain inspection, testing and maintenance records. Inspections will be performed on an Annual basis.

EXAMPLES OF WORK PERFORMED DURING AN INSPECTION INCLUDE:

- Inspect exterior of hydrant for damage or missing caps.
- Verify proper functioning.
- Flow each hydrant to insure all debris / foreign material is clear.
- Observe proper drainage from the barrel.
- Lubricate stem, caps, plugs and threads.
- Inspect for accessibility.
- Winterize as necessary.
- Upon completion of inspection and any necessary repairs, applicable inspection documents and noted deficiencies shall be left at location and available electronically.
